Job Description for Front End Developer

Who is Deputy?

Deputy is a cloud-based work scheduling and people management platform with social mobile technologies at its core. Since we launched back in 2008, it's been quite a journey. We're committed to making Deputy richer and provide ever more value to our customers. This means we're always working on upgrades and handcrafting new features. That's why we need your help! Visit **deputy.com** to learn more.

Duties in brief:

- Work with the product design and marketing teams to help design our user interface.
- Design and implement front-end features into the existing site using a combination of HTML, SASS, JavaScript and Photoshop.
- Troubleshoot design problems quickly and develop and maintain style guides and brand guidelines.
- Develop detailed storyboards, mock-ups and prototypes to effectively communicate product features, updates and design ideas.
- Convert PSD designs into functional pages across the site.
- Take a proactive approach to supporting the capability of the site through suggesting continuous improvements for the front-end development environment.

Highly Desirable:

Experience working on multiple projects for consumer-facing websites and webapps, including working with UX designers, exposure to high-end design js/css implementations such as parallax effect.

Requirements:

- B.Eng./B.Sc. in relevant discipline with experience in designing, implementing and managing web user interfaces using technologies such as HTML, CSS and JavaScript.
- Experience building user interfaces with JavaScript frameworks supported across multiple browsers.
- Superior communication skills coupled with demonstrable ability to collaborate effectively with internal stakeholders across a broad set of objectives and deliver successful outcomes.
- Demonstrated ability to work independently, contribute ideas and follow direction to execute tasks.

- Experience in web page design using Photoshop and converting PSD files into functional HTML and CSS.
- Exposure developing and delivering complex web applications in advanced Agile environments would be a distinct advantage.

What's on Offer?

- A genuinely supportive team to give direction on development and design ideas, and be there for you when you hit a wall.
- A relaxed environment with plenty of challenging work and the opportunity to stretch yourself.
- Collaborate on projects, present your own ideas and work independently to deliver the brief.
