

# You'll Be Flying on Cloud Nine

## Check Out What's New in ForeFlight 9

- ✓ Integrated ForeFlight Checklist
- ✓ Glide Advisor™
- ✓ Light & Dark App Themes
- ✓ SiriusXM Audio + new Surface Wind overlay
- ✓ Custom Overlays with User Map Shapes
- ✓ New Color IR Satellite Layer
- ✓ Device Disconnect Alert
- ✓ Logbook Enhancements

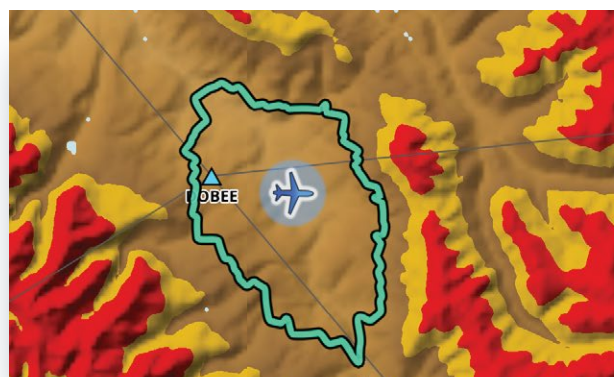

## ✓ Consolidate Your Toolset with Integrated ForeFlight Checklist

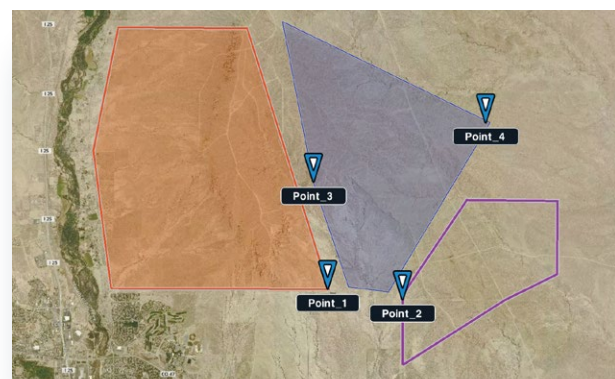

The procedures you rely on to conduct safer flight operations are organized, easily accessible, and always ready to fly. Available in Basic Plus and Pro Plus plans.

- Choose from built-in POH templates or create your own
- Interactive progress indicators leave no step left unchecked
- Single-tap access to emergency checklist procedures
- Share checklists with friends, club members, or aircraft partners

## ✓ Glide Advisor™

Using terrain, GPS data, winds aloft, and your aircraft's best glide speed and ratio, ForeFlight shapes a dynamic glide range ring around your ownship icon on the moving map display.

## ✓ Create Custom Overlays with User Map Shapes

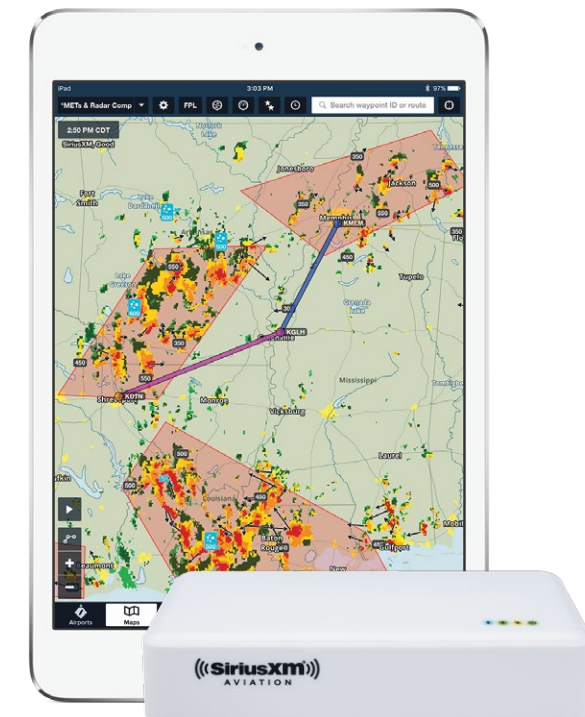

Import KML shapefiles via iTunes to display on the ForeFlight Maps view allowing you to define specific areas for your custom navigation needs. Ideal for flight schools, search and rescue operations, pipeline patrol, and more!

## ✓ Soundtrack Your Flights with SiriusXM Audio Support

Connect your Bluetooth audio device to the SXAR1 and listen to your favorite SiriusXM Satellite Radio stations while in flight. Use ForeFlight to browse and select your jam.

### Satellite Weather + GPS

Access high-quality satellite aviation weather in ForeFlight Mobile via the portable, wireless SiriusXM SXAR1. Products include high-resolution NEXRAD with storm cell attributes and tracks, Lightning, Cloud Tops, Echo Tops, Surface Wind, Winds/Temps Aloft, METAR/TAF, AIR/SIGMET, PIREP, and NOTAMS/TFR.

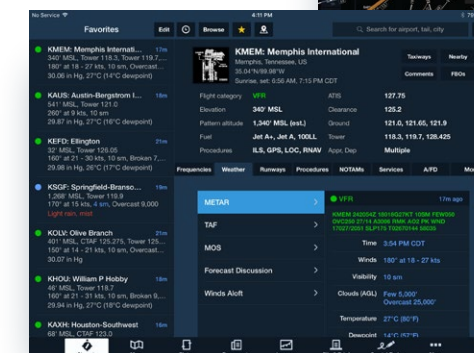

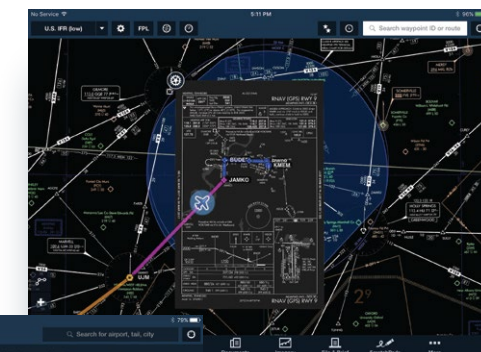

## ✓ Choose from Light & Dark App Themes to Suit Day or Night Flying

Flying at night is easier on your vision with the addition of a new Dark App Theme - a setting that converts the background color throughout the app from white to dark blue.

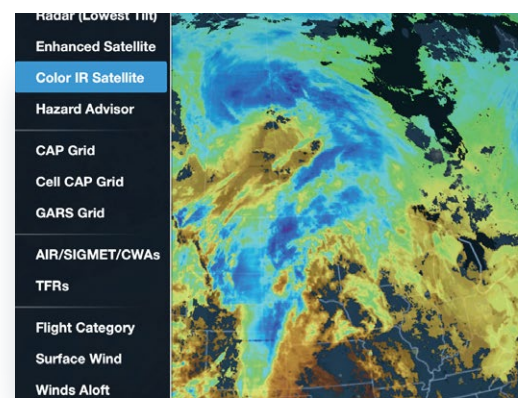

### Combine with Color Inversion

Color Inversion reduces the glare of bright app views by inverting white and black elements on IFR Enroute charts, VFR Sectionals, procedure plates, airport diagrams, and documents. Our **color-safe tech** preserves the standard chart legend colors that pilots are familiar with.

## ✓ New Color IR Satellite Layer

Useful for identifying regions of supercooled liquid water that can cause airframe icing.

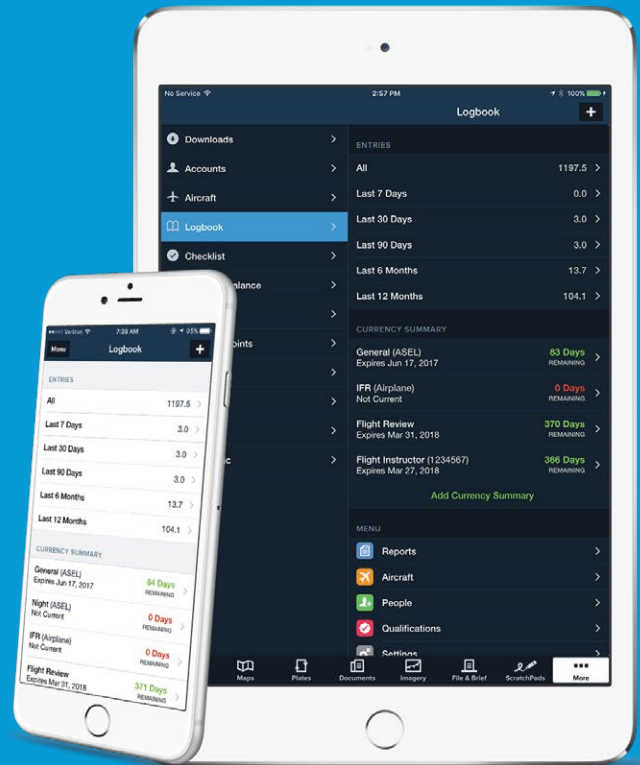

# ✓ Logbook Enhancements: Helpful Aircraft List Details & CFI Renewal Tracking

Easily view and edit details for Logbook aircraft profiles. See total hours in an aircraft right from the list view – a helpful design detail that gives you more visibility into your Logbook data at-a-glance.

## Color-Coded Currency Summary

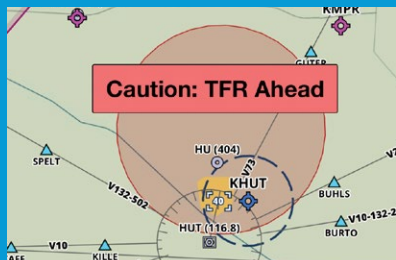

Your flight status stays front and center to help you keep on top of general, night, and IFR currency, as well as your CFI renewal, medical certificate, flight reviews, and type ratings.

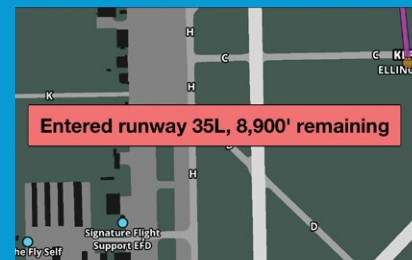

# ✓ Helpful Alerts Enhance Inflight Safety & Situational Awareness

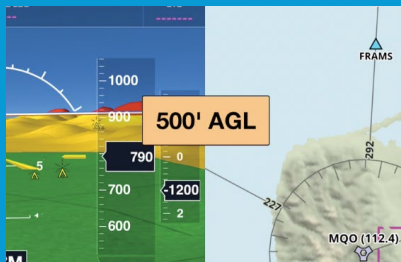

Destination Weather Frequency

TFR Alerts

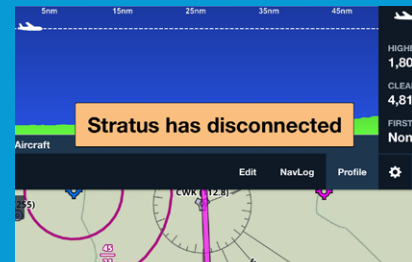

Runway Length Remaining

500' AGL Alert

Sink Rate Alert

Device Disconnect Alert

"This is by far the best aviation app. Period!" - DrSheriffToma
