11th April 2019

Our recruitment process involves lot of steps. One of the steps is to transfer the scores candidates get in online rounds to physical evaluation sheets that we use for final rounds and decision making discussions. Anandraj used to check the scores from online system and write down candidate details and scores by hand. This is a tedious and error prone manual process.

During the last off-campus drive, I was surprised to see evaluation sheets with fully printed candidate details and scores. Anandraj has used macros and templates concepts available in standard word processors (Pages) and spreadsheets (Numbers) to automate the individual creation of evaluation sheets for candidates with filled information.

The fact that he wanted to reduce manual work and the effort that he put for achieving this is **SIMPLY FANTASTIC!!!**
